USB2RS232   TSA USB Adaptor

USB2RS232 is a hardware interface for TSA USB mini spectrum analyzer. It converts the USB interface into the RS232 interface. It is simply a command set of the TSA USB mini spectrum analyzer. It also includes the calibration calculation so that TSA USB mini spectrum analyzer can directly work on embedded system when using the USB2RS232.

USB2RS232 work with any system which has RS232 interface so that TSA USB mini spectrum analyzer can work as sensor to build special application; such as monitor systems, ATE system, handheld product and wearable product.

Features:
✓Simplify the Command set
✓ Implement calibation calibration, and store the calibration table.
✓ USB port will be host and provide power to TSA USB mini spectrum analyzer
✓ Provide support that customer can integrate USB2RS232 into final application baord.

Application:
➤ Integrate with embedded system
➤ ATE system
➤ Education
➤ Industrial, Scientific, Medical (ISM) Band Application
➤ Field Service and Installation
